Subject: RE: storage stability question re: PFAS

Kerry knows way more about the storage stability data we receive than I do, so he may be able to weigh in on whether that amount of detail is included in the storage stability studies.

That would be the only way we would receive that type of information though. The registration form includes an entry for container type and size but that would most likely only include that the containers were made of high density polyethylene (HDPE) and would not identify any coating.

My understanding is that registrants only use containers coated with fluorine if necessary due to the solvents/inerts.

Nancy

Subject: storage stability question re: PFAS

Internal, deliberative

Do the storage stability data we receive include information on container type sufficient for us to tell if the containers contain/are coated with fluorinated polymers?

Best,
Catherine
